

STYLEman Mobile Connected Commerce

One of the challenges facing all businesses is how to offer better Customer Service at lower cost, and the answer to this challenge is to increase the automation and reduce the number of times information is passed around.

STYLEman Mobile is designed to do this for users of STYLEman ERP, by offering customers the ability to become self-serving for placing orders and for accounts enquiries.

Salespeople get the facility to take Forward and Stock orders, both in a showroom or exhibition environment from samples, or by browsing virtual catalogues. All customer and salesman orders can be reviewed internally before being processed, and the reduced number of steps involved in getting orders from customers into the system will increase efficiency and reduce transcription errors. Both Customers and Salespeople can have documentation emailed directly to them.

STYLEman Mobile can be used in the office too by Customer Service personnel as a simplified way of responding to customer queries, and by Retail and Concession Managers to manage shop stock.

The technology in use means that all modern devices can be used with STYLEman Mobile, but it is particularly designed for the touch interface on Tablets.

STYLEman Mobile Connected Commerce

STYLEman Mobile

STYLEman Mobile extends the functionality of STYLEman ERP for people who are involved in the selling process, be that Customers, the Sales Force, Customer Service or Concession Managers. It does so using the latest technology so that it can run on virtually any modern PC, Mac, Tablet and smartphone, using either keyboard and mouse or touch-based interaction.

Mobile for Customers

STYLEman Mobile allows Customers to become self-serving, reducing the reliance and burden on Customer Service staff. They can review your catalogues, place forward and stock orders, check their account balances and review their order, invoice and returns history. In addition, they can produce Statements, Order Acknowledgements, copy Invoices and Credits, all emailed directly to them. And this functionality is available 24x7, rather than just during office hours.

Mobile for Salespeople

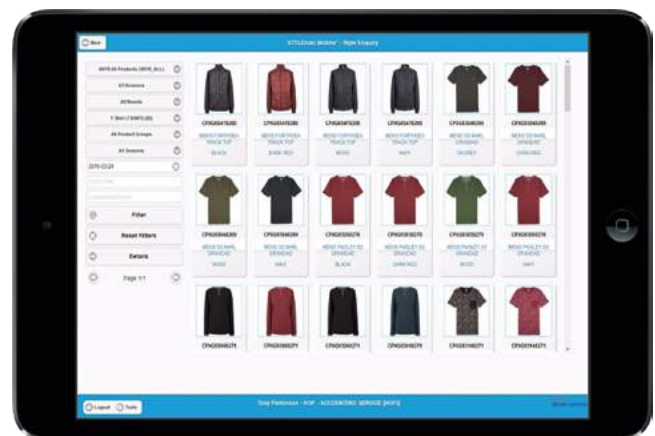

For Salespeople, STYLEman Mobile curates their customers and allows the Salesperson to select the customer with whom they have the appointment. They are then working with this customer until they move on to the next appointment. In addition to having the same facilities as Customers, they can also take Showroom orders, by grouping the samples together that the customer likes, scanning a sample's barcode and immediately getting access to the matrix of available colours and sizes for that style. Salesmen also have some limited access to maintain existing customer orders.

Mobile for Customer Service

Customer Service staff have access to all customers, and more sophisticated Order Maintenance functionality. Again, when the phone rings and they select the customer, they are working with the customer until they change accounts.

Mobile for Concession Managers

STYLEman Mobile can be used by Concession Managers to check stock availability in the warehouse and to order replenishment stock or additional lines, and the barcode scanning will allow concession stock takes to be captured and sent back to STYLEman ERP.

Technical Notes

- PHP, Javascript and SQL technology
- Links to STYLEman ERP via Web Services
- Designed for Touch Interface devices
- Highly configurable UI appearance
- Highly configurable Functionality via backroom Application

STYLEman Mobile Functionality
